ACKNOWLEDGMENTS

This book was developed with the help of many people. Heartfelt thanks are expressed to Catherine Cowell, principal consultant for this project and the chair of Caring for Our Children: National Health and Safety Performance Standards Nutrition Technical Panel, for her insight and expertise. Her vision and understanding of the needs of the target audience helped shape this document from the beginning.

The editors would like to recognize the Maternal and Child Health Bureau for its support of this book and extend a special thank-you to Denise Sofka, the project coordinator for this effort. Thanks also go to Phyllis Stubbs-Wynn, Ann Prendergast, and Jane Coury of the Maternal and Child Health Bureau. This book would not have happened without their guidance, review, and support.

Deep gratitude is expressed to those who agreed to serve on the Maternal and Child Health Bureau advisory committee for this project. They provided very valuable input and feedback during the development of this book, provided the names of contact people working in this field, contributed materials, and reviewed several drafts. These include Maryrose J. Baiano, Doris F. Clements, Claude Marie Colimon, Ofelia Dirige, Elizabeth Ford, Terry S. Hatch, Brearley Karsch, Brenda Lisi, Deborah Markenson, Sarah Nordmann, Marion Scarborough, Ruth Shrock, and Frances Vines.

Appreciation is expressed to many others who responded to surveys, participated in telephone interviews or focus groups, shared ideas, or reviewed drafts. These include Art Banks, Margaret L. Bogle, Sandra Booker, Joyce Borgmeyer, Margaret Briely, Rosalie D'Grae Brito, Kathy Brunner, Alice Carroll, Ming Cribbs, Cindy DeBlauw, Lavingika Desai, Dianne Durant, Patricia Freeman, Gail Gibbons, Jeannie Goldberg, Natalie González, Pamela Hannaw, Deborah Haus, Molly Holland, Kay Hollestelle, Miriam C. A. Junqueira, Virginia Keeling, Carol Loomis, Anita Lopez, Connie Lotz, Pamela P. Mccandless, Ann Mccormack, Beth Mcdonald, Holly McPeak, June Madden, Barbara M. Ulley, Paula M. Ydlenski, Candida Rodriguez, Carol Schiffman, Deborah Simpson, Pam Tatum, Kathy Thornburg, Elaine Dillon Trate, John Wallingford, Cyndy Wilks, Nancy Wooldridge, and Norma Yess.

Finally, appreciation is expressed to colleagues at the National Center for Education in Maternal and Child Health (NCEMCH), without whose support this project would not have been possible. Carole Kuhns, Karin Elliot, and Karin Elliott served as liaisons from the National Resource Center for Health and Safety in Child Care and provided many valuable suggestions and names of contacts in the field. The expertise of the publications staff—Judith Serevino, copyeditor; Kenna French, designer/illustrator; Oliver Gribble, senior graphic designer; and Carol Adams, director of communications—is evident in this publication.
HOW TO USE THIS BOOK

Use this book as a guide for meeting the nutrition standards in National Health and Safety Performance Standards: Guidelines for Out-of-Home Child Care Programs. The original version, Caring for Our Children: National Health and Safety Performance Standards—Guidelines for Out-of-Home Child Care Programs was developed by the American Public Health Association and the American Academy of Pediatrics through a grant from the Maternal and Child Health Bureau. This book presents information about all of the nutrition-related standards in chapters divided by topic. Look at individual chapters for specific information such as using foods that are safe to eat (Chapter 3) or planning to meet the children’s food needs (Chapter 4).

Standard Numbers

The small numbers at the end of some sentences (e.g., NU47) refer to the standard that is being discussed in the text. The standard is printed to the side of the page for easy reference.

Checklists

Several chapters contain checklists that include key points from the chapter. There is a checklist for food safety and one for menu planning.

Boxes and Figures

The boxes and figures contain important information and practical tips to help you meet the standards (for example, “Sample Cleaning Schedule” and “Meal and Snack Schedule”). Many of these tips are on a page by themselves. You can photocop y them and hand them out or hang them on a bulletin board, wall, or door. This book is not copyrighted—you may reproduce any part of it.

Appendix

Look in the appendix for a list of community resources that can help you, a list of books and materials you can use, information about standards that only centers need to meet, and materials for parents.
One of the most basic ways to show that we care about children is to feed them nourishing and safe foods. Feeding children is important for a number of reasons:

- Food gives children the energy and nutrients they need to be active, to think, and to grow.
- Food helps to keep children healthy. Good nutrition helps a child’s cuts and scrapes heal. Good nutrition helps a child’s body fight off colds and diarrhea.
- Feeding children can give them a sense of closeness with another person.
- Food makes children feel more comfortable and secure and takes away feelings of hunger.
- Feeding children helps them learn about their world. When children eat, they use all their five senses (taste, smell, sight, hearing, and touch).
- Children develop fine motor skills (such as picking up pieces of food between their thumb and fingers and correctly using utensils) when they eat, serve themselves, and handle food.
- Children develop self-esteem when they learn to feed themselves.
- When children eat with others, they develop language and social skills.

You have chosen to care for other people’s children, and feeding these children is part of your work. Feeding children foods that are nourishing and clean keeps children healthy and safe.

Purpose of This Book

This book was written to help you (1) provide children with healthy and safe food, and (2) meet the nutrition standards in National Health and Safety Performance Standards: Guidelines for Out-of-Home Child Care Programs.¹ The standards are goals—

¹ These standards were originally published in 1992 as Caring for Our Children: National Health and Safety Performance Standards—Guidelines for Out-of-Home Child Care Programs. They were developed by the American Public Health Association and the American Academy of Pediatrics with support from the Maternal and Child Health Bureau, Health Resources and Services Administration, U.S. Department of Health and Human Services.
something to work toward. Even if you cannot meet every standard, keep the goals in mind. Every step that you take toward meeting the goals will make a difference. Follow the guidance and suggestions in this book to help keep you and the children you care for safe and healthy.

Most of the goals are the same for family child care homes and child care centers. Centers need to meet some extra standards because they care for more children. The appendix of this book has a special section for centers.

This book can help you:

- Create a healthy and safe place for children
- Find ways to make your job easier
- Locate useful materials
- Find resources in your community

This book will help you meet national goals, but you also need to follow state and local rules. To find out what the rules are, contact your state or local child care licensing or regulatory agency. If you are not regulated by any agency, contact a local child care referral agency. You can look for a telephone number in the:

- Yellow Pages under “child care referral service”
- Blue Pages under “child care” (if available)
- Special section called “Community Service Numbers” in front of the telephone book White Pages
**Tips for Child Care Providers**

Keep these things in mind as you use this book:

- **Show respect for each child's culture.**
- **Remember that each child develops differently—in both body and mind.**
- **Talk with and involve the parent.** Support the relationship between parent and child.
- **Plan activities that nurture the child's development.**
- **Keep written policies, procedures, and health records.** Identify requirements and who has to make sure they are met.

**Use health records to:**
- Keep track of the child's nutrition and health,
- Manage minor or chronic disease (through special diets),
- Keep track of food allergies,
- Know who to contact if you need a medical decision about a child, and
- Inform the parent about the child's health (including eating patterns) and nutritional status or follow-up to a specific problem.

**Keep records private.**

**Know and follow your policies and procedures about caring for sick children.**

**Make sure that all care providers know how to:**
- Prevent illness in themselves and in the children,
- Prevent injury to themselves and to the children, and
- Meet the children's special nutrition needs.

**Provide food that:**
- Is clean and safe,
- Helps to meet the children's daily nutritional needs,
- Introduces the children to each other's cultures, and
- Gives the children a chance to learn.

**As much as you can, provide care for all children—those with disabilities and those without disabilities—together.**

---

2 We use the term parent for convenience to describe the adult or adults responsible for the care of the child. This person could be a grandparent, custodian, or legal guardian.

Some of the information in this book is based on the requirements for the U.S. Department of Agriculture (USDA) Child and Adult Care Food Program (CACFP). If you participate in that program, you have a separate set of rules that you need to follow. Contact your sponsor or state agency if you need help following those rules.
CHAPTER TWO
KEEPING EVERYTHING CLEAN

One of the most important things you can do for children is to provide them with clean, safe food. Cleanliness is very important in a child care setting. Keeping everything clean makes it hard for bacteria to grow. Keep hands, equipment, dishes, containers, and food clean and free of germs to help protect yourself and the children from illness.

Washing Hands—Yours and the Children’s

One of the easiest and best ways to prevent the spread of germs is for you and all child care providers to wash your hands often (e.g., before preparing or eating food, after using the toilet or changing a diaper). When you wash your hands, scrub them with soap and warm running water for at least 10 seconds. Children may need to use liquid soap if bar soap is too hard for them to handle. Be sure to wash between fingers and under fingernails. Use a nail brush if necessary. Always use disposable towels to dry hands. Cloth towels can spread germs.

NU36 Children and staff shall wash their hands as specified in Handwashing.

HP30 Children and staff shall wash and scrub their hands for at least 10 seconds with soap and warm running water.
When should you and the children wash your hands? HP29

Always wash your hands...

- After diapering a child or running your hand inside a diaper to see if it needs changing
- After using the toilet or helping a child to use the toilet
- After sneezing or using a tissue or helping a child to do so
- After coughing into your hand
- After playing with, feeding, or caring for pets or other animals
- After eating, drinking, or smoking
- After handling raw food
- Before preparing, handling, or serving food, including bottles of infant formula or breast milk
- Before setting the table or sitting down to eat
- Any time hands come into contact with body fluids (especially if they contain blood) HP36
- ANY TIME you are not sure your hands are clean HP29

Teach children how to wash their hands, and remind them to do it often. HP31 Set a good example for the children. Remember—when in doubt, wash your hands! Be sure that the children in your care do, too.

Washing and Drying Dishes

To clean and sanitize dishes and utensils, wash them in either:

a) A dishwasher that sanitizes using heat or chemicals OR
b) A three-compartment sink where dishes can be washed, rinsed, and then sanitized. If you do not have a sink with three compartments, use a large dish pan as the second and/or third compartment. NU98
Check with your local health department. Sometimes local health
codes specify what equipment family child care home providers
must have.

When using a three-compartment sink, do this to wash, rinse,
and sanitize dishes:

Scrape food from plates, utensils, pots and pans, and equip-
ment used to prepare food.

Wash the dishes thoroughly in hot soapy water. Use
clean dishcloths to wash dishes. Wash dishcloths
each day. Don’t use
sponges—they often spread germs.

Rinse the dishes in hot water.

Sanitize the dishes in one of these ways:

a) Soak the dishes (completely covered) in 170°F
water for at least 30 seconds. (You will need a
utensil thermometer to check the water

temperature.)

NU99 If a dishwasher is not used,

reusable food service equipment and eating
utensils shall be scraped of food when nec-
essary, thoroughly washed in hot water
containing a detergent solution, rinsed, and
then disinfected by one of the following
methods:

a) Complete immersion in hot water and
maintenance at a temperature of
170°F for not less than 30 seconds.
The items shall be air-dried.

b) Immersion for at least 1 minute in a
lukewarm (not less than 75°F) chemi-
cal disinfecting solution equivalent to a
chlorine bath containing a minimum
of 50 to 100 ppm of available chlorine
at all times. (Three-fourths to 11/2
tablespoons of fresh liquid chlorine
bleach in 1 gallon of water will usually
provide the proper mixture.) The disin-
fected items shall be air-dried.

Other methods may be used if approved by
the governing health agency.
b) Soak the dishes for at least 10 seconds in a disinfecting solution of chlorine bleach and warm water (at least 75°F). Use 3/4 to 1 1/2 tablespoons of liquid chlorine bleach mixed with 1 gallon of water. **NU99**

If a dishwasher is not used, reusable food service equipment and eating utensils shall be scraped of food when necessary, thoroughly washed in hot water containing a detergent solution, rinsed, and then disinfected by one of the following methods:

a) Complete immersion in hot water and maintenance at a temperature of 170°F for not less than 30 seconds. The items shall be air-dried.

b) Immersion for at least 1 minute in a lukewarm (not less than 75°F) chemical disinfecting solution equivalent to a chlorine bath containing a minimum of 50 to 100 ppm of available chlorine at all times. (Three-fourths to 1 1/2 tablespoons of fresh liquid chlorine bleach in 1 gallon of water will usually provide the proper mixture.) The disinfected items shall be air-dried.

Other methods may be used if approved by the governing health agency.

**NU56** All sinks shall be supplied with hot and cold running water under pressure.

**FA169** Facilities shall have water heating facilities that are properly connected to the water supply system. These facilities shall be capable of heating water to at least 120°F and shall deliver an adequate amount of hot water at every required fixture. Where a dishwasher is utilized, means shall be provided to heat water supplied to such equipment to at least 140°F.

**FA171** Food preparation, handwashing, and bathing facilities shall be provided with hot and cold or temperate running water. Where such water will be in direct contact with children, the temperatures shall not exceed 120°F. Scald prevention devices such as special faucets or thermostatically controlled valves shall be permanently installed to provide this temperate water. These temperature limitations do not apply to water supplying dishwashers or laundry equipment where there is no direct exposure to children.

**NU98** Small and large family child care homes shall provide a three-compartment dishwashing area or a dishwasher. At least a two-compartment sink shall be installed to be used in conjunction with a dishwasher to wash, rinse, and disinfect dishes. The dishwashing machine must be chemically or heat-disinfected. If a dishwasher or a three-compartment dishwashing area is not used, paper cups and plates and plastic utensils shall be used and shall be disposed of after every use.

If you do not have a dishwasher or need some time to arrange for a three-compartment washing area, use disposable paper plates and cups, and sturdy plastic utensils, to help prevent the spread of germs. **NU98** *(Do not use foam cups and plates or light-)*

---

**Water Temperature**

Sinks should have soap available and hot and cold running water under pressure. This is necessary to clean equipment and wash hands properly. **NU56** In sinks where you will wash dishes, the water should be at least 120°F. Water in the dishwasher should be at least 140°F. **FA169**

Sinks where children wash their hands should not have water that is hotter than 120°F. Very hot water can burn children. Use a utensil thermometer to check the temperature of the water. Install special faucets or temperature control valves to keep children from being burned. **FA171**
weight plastic utensils because young children could bite off pieces and choke.) Throw away these items and other single-service items such as paper bibs and napkins after each use. Use these disposable items until you can arrange for a three-compartment washing area.

All cooking equipment should be washed with hot soapy water, rinsed, sanitized, and air-dried.

**Cleaning Equipment**

Keep all kitchen equipment clean and in good working order. Keep all surfaces clean in the food preparation area. This includes tables and countertops, floors, and shelves. Surfaces that food will be placed on should be made of smooth material that has no holes or cracks. Clean all food service and eating areas with clean dishcloths and hot soapy water before and after each meal. Wash plastic tablecloths and placemats with clean dishcloths and hot soapy water. To disinfect these surfaces, use a solution of 1/4 cup liquid chlorine bleach mixed with 1 gallon of tap water. Leave the surface glistening and allow it to air-dry.

After every use, clean mixers and other cooking equipment with hot soapy water, rinse well, and let air-dry. Remember to unplug all electrical appliances before washing. Store all food equipment in a clean covered area or cover the equipment.

Keep refrigerators and freezers clean. Scrub cutting boards with hot soapy water before using them for a different food. Use only cutting boards made of nonporous material (e.g., plastic; hard, close-grained wood). Don't use boards with cracks or crevices where germs can collect. It is best to have two cutting boards—one for raw meat, poultry, and seafood, and another for cooked foods and raw fruits and vegetables.

Be Good to the Earth

Recycle whenever possible. Here are some things you can do:

* Find out what your community recycles—glass containers, plastic containers, aluminum cans, steel cans.
* Take canvas or string bags with you to the store to use instead of paper or plastic ones.
* Buy food in bulk—without excess packaging.
If you use washable napkins and bibs, wash them after every use. Young children should have clean bibs. Bibs should not be shared. If you use tablecloths, keep them clean. Some states have rules about whether washable items like tablecloths and placemats can be used and how often they should be washed. Check with your local health department sanitarian or extension agent.

(For more information, see Figure 2.1, “Sample Cleaning Schedule.”)

**Keeping the Kitchen Clean**

Keep the food preparation areas separate from the eating, playing, diaper changing, and toileting areas. Keep pets and their food out of the food preparation area. If this is not always possible, keep pets out of the kitchen while you are preparing food. Keep pets away from areas where children are eating. Do not use the food preparation area as a passageway while food is being prepared.

If possible, have two sinks in the food preparation area—one for handwashing and the other for food preparation. Never wash your hands when food is in the sink. Wash your hands before you begin preparing food. If you use the kitchen sink to wash your hands, then wash the sink thoroughly with hot, soapy water and rinse it before you start preparing food.

Clean fruits and vegetables and clean the sink before you work with meat and poultry. Never have raw meat or poultry out on the counter or sink near fruits and vegetables, breads, or cooked meats. Always wash hands, utensils, and counter or sink after handling raw meat or any food product.

Keep garbage in containers with disposable liners and tight-fitting lids. Store the containers where children cannot get into them. Remove garbage from the kitchen daily, or more often as needed.
